PROFESSIONAL SUMMARY

Founding Mobile Engineer & former Gojek Engineering Manager with 10+ years of deep technical experience architecting, building, and scaling production mobile applications from 0-to-1. Combines rapid cross-platform execution (React Native / Expo) with deep native foundations (Android, Kotlin, Swift) to build high-performance, crash-resilient iOS and Android applications. Experienced in full product delivery - designing offline-first architectures, integrating modern BaaS/APIs (Supabase, Firebase, REST/GraphQL), and establishing automated CI/CD pipelines from scratch. Offers exceptional business empathy, total autonomy, and architectural maturity without requiring day-to-day supervision. Proven impact: raised Gojek crash-free stability from 82% to 99.3% in 60 days, executed a 90-table zero-downtime database migration, and deployed autonomous AI coding agents that slashed feature turnaround times from days to hours.

CORE TECHNICAL SKILLS

Mobile & Cross-Platform: React Native, Expo, TypeScript, Android SDK, Jetpack Compose, Kotlin, Swift, Native Modules / Bridges
Architecture & Backend Sync: Offline-First Sync, Clean Architecture, Supabase, Firebase, REST / GraphQL, SQL, Multi-Module Systems
Delivery & Monetization: Fastlane, Automated CI/CD Pipelines, In-App Subscriptions (RevenueCat / Stripe), Google Play Console, App Store
Testing & Quality: App Stability / Crash Monitoring, JUnit, Jest, Espresso, Playwright, Appium, Code Review & Conventions
AI & Modern Tooling:AI Coding Agents, Claude Code, Cursor, Workflow Automation, Zero-Ceremony Startup Velocity

PROFESSIONAL EXPERIENCE

SWAT Mobility | Singapore (Remote) — Jun 2023 - Present

Senior Mobile Engineer / Tech Lead (Contract, Full-time)

* **End-to-End Product Ownership:**Own mobile delivery end-to-end across two core operational logistics flows, driving architecture, multi-region reliability, and release velocity.
* **Core Navigation & Maps:** Architected and delivered custom navigation and route-optimization mapping experience used daily by enterprise drivers and operational dispatchers.
* **Cross-Platform & Compose Modernization:**Spearheaded zero-downtime migration of core map and operational flows to modern declarative UI, optimizing render performance and cross-platform alignment.
* **Clean Modular Architecture:**Redesigned a monolithic codebase into a multi-module Clean Architecture system, establishing strict boundaries between feature layers and core infrastructure.
* **Automated CI/CD from Scratch:** Built complete CI/CD automation using Fastlane and Gradle, eliminating manual release overhead across multiple app stores.
* **AI-Assisted Development Velocity:**Built and deployed AI-assisted coding agents automating UI scaffolding, lightweight bug fixes, and PR reviews - reducing task turnaround from days to hours.
* **Global Multi-Localization:**Scaled localization architecture across English, Indonesian, Vietnamese, Thai, and Japanese, supporting enterprise operations in UAE, Singapore, Japan, and Thailand.

Moladin | Indonesia (Remote) — Nov 2022 - Feb 2023

Senior Mobile Developer

* **Field Workflow Optimization:**Engineered key mobile features supporting field sales operations, making field transaction logging and verification workflows substantially more efficient.
* **CI/CD Infrastructure:** Introduced automated CI/CD pipelines with Jenkins for the mobile team, creating a repeatable, deterministic base for builds and releases.
* **Engineering Quality & Mentorship:**Mentored engineers on clean, maintainable, and scalable coding practices; elevated code quality through structured peer reviews and conventions.

PROFESSIONAL EXPERIENCE (CONTINUED)

Gojek (Moka, GoTo Group) | Indonesia **Jan 2021 - Feb 2022**

Engineering Manager (Technical Lead / Mobile)

*** Crash Stability Turnaround:** Raised Android crash-free users from 82% to 99.3% in under two months by diagnosing root-cause failure points, eliminating memory leaks, and enforcing strict stability SLAs.

*** Team & Delivery Leadership:** Managed a 13-person cross-functional team of mobile, QA, and backend engineers, delivering complex product features on time to high engineering standards.

*** System Design & Architecture:** Made key architectural decisions across mobile and backend, guiding technical proposals and balancing feature velocity against technical debt paydown.

*** Mentorship & Engineering Standards:** Coached engineers on system design and clean code; instituted automated testing with Appium and standardized release procedures.

Moka POS (Acquired by Gojek) | Indonesia **Nov 2018 - Jan 2021**

Senior Mobile Engineer

*** 90-Table Zero-Downtime Migration:** Migrated core offline-first storage from raw SQL queries to Room across 90 database tables, rolled out gradually over 6 months without merchant disruption.

*** Critical POS Capabilities:** Shipped four complex merchant POS capabilities in under six months, including checkout, KYC/KYB registration, card/QR payments, and hardware receipt printing.

*** MokaPay Architecture:** Architected 'MokaPay', a lightweight standalone POS application reusing the existing codebase with a reduced surface for high-volume transactions.

*** Modern Background Sync:** Modernized 27 outdated synchronization components affected by Android OS changes, eliminating the application's most frequent background crash.

Docotel Group | Indonesia **Jul 2017 - Oct 2018**

Lead Mobile Developer

*** Client Mobile Solutions:** Directed mobile development of enterprise client apps on Android and iOS from initial technical planning through store release.

*** Multi-Variant Architecture:** Delivered and released multiple variants of client apps, adapting core functionality to diverse business requirements without sacrificing code quality.

*** Full-Stack Alignment:** Collaborated with Golang backend engineering teams to ensure low-latency API contracts and reliable mobile synchronization.

EARLY CAREER HISTORY (2011 - 2017)

Mobile Frontend Developer (Android & iOS) - PT Indiva Finansia Teknologi (Jun 2015 - Jun 2017): Built native Android (Java) and iOS (Swift 3) financial client interfaces adhering to Google Material Design guidelines.

Project Manager & Game Developer - Agate (Dec 2011 - Oct 2014): Shipped cross-platform game titles across iOS, Android, and Windows with Unity (C#) and Flash (ActionScript 3.0).

LANGUAGES & PROFESSIONAL COMPETENCIES

English (Professional Working Proficiency) * Indonesian (Native Proficiency)

Core Engineering Philosophy: Autonomous 0-to-1 execution, high-stability production architectures, zero-ceremony startup velocity, and continuous mastery of modern AI developer tooling.
