PROFESSIONAL SUMMARY

Senior Mobile Engineer with 10+ years in software development and deep Android/Kotlin expertise across production-critical POS and logistics products. Improved crash-free users from 82% towards 99.8%, rebuilt a monolithic app into 37 modules, cut builds from 8–10 minutes to 3–4 minutes, and automated mobile releases. Former Lead Android Engineer and Engineering Manager, combining hands-on delivery with architecture and cross-functional technical leadership. Experienced in remote international collaboration.

PROFESSIONAL EXPERIENCE

Senior Android Developer (Contract) | *Jun 2023 – Sep 2026*
SWAT Mobility (Singapore) | Remote, full-time
Regional route-optimization platform across B2B and B2C mobility and logistics.

- Replaced an unsupported map SDK and migrated 10 map screens from XML to Jetpack Compose across transport and logistics apps on phone and tablet, restoring blocked releases in 1.5 months.
- Built the logistics driver product solo on the existing route-optimization platform; shipped across the UAE, Singapore, Philippines, Thailand, and Japan, supporting 10,000+ delivery orders per day.
- Re-architected a monolithic Android app into 37 modules and reduced build times from 8–10 minutes to 3–4 minutes; established unit tests and reached 80% coverage.
- Built CI/CD from scratch with Gradle and Fastlane, automating tests and release distribution to Google Play, Firebase App Distribution, and Huawei AppGallery.
- Built AI agents for UI automation, crash triage, and pull-request review, increasing team throughput by up to 70%.

Technologies: Kotlin, Jetpack Compose, Maps SDK, Coroutines, Room, Gradle, Fastlane, Detekt, JaCoCo, Playwright

Engineering Manager; previously Lead Android Engineer | *Jan 2021 – Feb 2022*
Gojek (Moka — GoTo Group) | Indonesia
POS platform serving retail and food merchants.

- Improved Android crash-free users from 82% towards 99.8% in two months by making stability a measurable engineering priority.
- Led 12 Android engineers on core client architecture, then managed a 13-person cross-functional team across Android, QA, and backend.
- Led remediation of 27 failing background-sync components; modernized deprecated Android mechanisms and rolled out fixes gradually, reducing sync issues to near zero.
- Took over KYC/KYB self-registration, streamlined scope, and shipped in 1.5 months against a six-month estimate; self-registrations grew 10×.
- Migrated 90 database tables from raw SQL to Room through gradual releases over six months with no downtime; set team OKRs and quality standards.

Technologies: Kotlin, Java, Room, MVVM, PostgreSQL, Appium, Jenkins

Senior Android Developer | *Nov 2022 – Feb 2023*
Moladin | Indonesia
Automotive marketplace and field-sales financing app.

- Delivered Android features for sales workflows and introduced the team's first Jenkins CI/CD pipeline.
- Mentored Android engineers and strengthened code-review standards for maintainable, scalable implementation.

Technologies: Kotlin, Java, SQL, Jenkins

PROFESSIONAL EXPERIENCE — CONTINUED

Freelance Android Developer | *Feb 2022 – Oct 2022*
Self-employed | Remote

- Delivered Android development work for freelance clients while building hands-on experience with Jetpack Compose and Flutter.

Technologies: Android, Kotlin, Jetpack Compose, Flutter

Lead Mobile Developer | *Jul 2017 – Oct 2018*
Docotel Group | Indonesia
Client-focused mobile apps.

- Led Android and iOS client-app development from technical planning through app-store release.
- Translated client requirements into technical plans, coordinated design/backend/QA, and kept Android and iOS implementations aligned.

Technologies: Java, Android, iOS, Swift, Golang

Android & iOS Developer | *Jun 2015 – Jun 2017*
PT Indiva Finansia Teknologi | Indonesia

- Built native Android interfaces in Java and iOS interfaces in Swift 3, including reusable views and responsive layouts for phones and tablets.

Technologies: Java, Android SDK, Swift 3, Material Design, Interface Builder

Co-Founder & Game Developer; Project Manager | *Dec 2011 – Oct 2014*
Agate / Agate Jogja Studio | Yogyakarta, Indonesia
Early-stage game production and project delivery.

- Co-founded a game studio; built cross-platform games with Unity and C# for iOS, Android, and Windows, and managed project timelines, milestones, and client communication.

Technologies: C#, Unity, ActionScript 3.0, PHP

CORE SKILLS

Mobile & Cross-Platform: React Native, Expo, TypeScript, Android SDK, Jetpack Compose, Kotlin, Swift, Native Modules / Bridges
Architecture & Backend Sync: Offline-First Sync, Clean Architecture, Supabase, Firebase, SQL, Multi-Module Systems
Delivery & Monetization: Fastlane, Automated CI/CD Pipelines, In-App Subscriptions (RevenueCat / Stripe), Google Play Console, App Store
Testing & Quality: App Stability / Crash Monitoring, JUnit, Jest, Espresso, Playwright, Appium, Code Review & Conventions
AI & Modern Tooling: AI Coding Agents, Claude Code, Cursor, Workflow Automation, Zero-Ceremony Startup Velocity
