PROFESSIONAL SUMMARY

Founding Mobile Engineer & former Gojek Engineering Manager with 11+ years of deep technical experience architecting, building, and scaling production mobile applications from 0-to-1. Combines rapid cross-platform execution (React Native / Expo) with deep native foundations (Android, Kotlin, Compose, Swift) to build high-performance, crash-resilient iOS and Android applications. Experienced in full product delivery: offline-first architectures, integrating BaaS/APIs (Supabase, Firebase, REST/GraphQL), and establishing automated CI/CD pipelines from scratch. Offers exceptional business empathy, total autonomy, and architectural maturity without requiring day-to-day supervision. Proven impact: raised Gojek crash-free stability from 82% to 99.3% in 60 days, executed a 90-table zero-downtime database migration, built solo delivery logistics scaling to 10k+ daily orders across 5 countries, and deployed autonomous AI coding agents that accelerated feature turnaround by up to 70%.

CORE TECHNICAL SKILLS

Mobile & Cross-Platform: React Native, Expo, TypeScript, Android SDK, Jetpack Compose, Kotlin, Swift, SwiftUI, Native Modules

Architecture & Backend Sync: Offline-First Sync, Clean Architecture, Supabase, Firebase, REST / GraphQL, SQL, Multi-Module Systems

Delivery & Monetization: Fastlane, Automated CI/CD Pipelines, In-App Subscriptions (Stripe/RevenueCat), Google Play, App Store, EAS

Testing & Quality: App Stability / Crash Monitoring, JUnit, JaCoCo (80% coverage), Detekt, Playwright, Appium, BDD (Gherkin)

AI & Modern Tooling: AI Coding Agents, Claude Code, Cursor, Workflow Automation, Zero-Ceremony Startup Velocity

PROFESSIONAL EXPERIENCE

SWAT Mobility | Singapore (Remote) — Jun 2023 - Sept 2026

Senior Mobile Engineer / Tech Lead (Contract, Full-time)

* **Solo Logistics Delivery (0 to 1):** Designed and built delivery product solo on SWAT's routing engine; live across 5 countries (Singapore, UAE, Japan, Philippines, Thailand) handling 10,000+ daily orders and opening B2B retail revenue.
* **Map SDK Rescue & Compose Migration:** Replaced an outdated forked Map SDK blocked by Google Play's 16KB native page-size requirement; migrated 10 map screens across phone and tablet to Jetpack Compose in 1.5 months, unblocking store releases.
* **Multi-Module Architecture Rebuild:** Rebuilt legacy monolithic codebase into 37 multi-modules, reducing Gradle build times from 8-10 minutes down to 3-4 minutes while establishing strict domain boundaries.
* **Quality & Test Infrastructure:** Elevated unit test coverage from 0% to 80% (verified via JaCoCo reports) and standardized team-wide coding conventions with Detekt static analysis.
* **Zero-Touch CI/CD from Scratch:** Built complete CI/CD automation using Fastlane, eliminating manual release overhead with automated testing and publishing to Google Play, Firebase Distribution, and Huawei AppGallery.
* **AI-Assisted Development Velocity:** Built and deployed custom AI coding agents for UI automation, crash triage, and PR review, accelerating team delivery throughput by up to 70%.

Moladin | Indonesia (Remote) — Nov 2022 - Feb 2023

Senior Mobile Developer

* **Field Workflow Optimization:** Engineered key mobile features supporting vehicle financing sales operations, significantly streamlining transaction logging and field verification workflows.
* **CI/CD Infrastructure:** Introduced the company's first automated CI/CD pipeline on Jenkins for the mobile team, creating a repeatable, deterministic base for staging and production builds.
* **Engineering Quality & Mentorship:** Mentored engineers on maintainable, scalable coding practices; elevated code quality through structured peer reviews and conventions.

PROFESSIONAL EXPERIENCE (CONTINUED)

Gojek (Moka, GoTo Group) | Indonesia **Jan 2021 - Feb 2022**

Engineering Manager (Technical Lead / Mobile)

*** Cross-Functional Team Leadership:** Managed a 13-person cross-functional engineering team (Android, QA, Backend); set OKRs, engineering quality standards, and technical roadmaps for a platform serving 1M+ merchants.

*** Operational Stability Turnaround:** Championed crash-free stability as the headline team objective, driving operational SLAs, fixing memory leaks, and eliminating runtime bottlenecks.

*** System Design & Architectural Governance:** Guided key technical proposals across mobile and backend services, balancing rapid product delivery against technical debt paydown.

*** Engineering Mentorship & Standards:** Coached engineers on system design and clean code; instituted automated UI regression testing with Appium and standardized release criteria.

Moka POS (Acquired by Gojek) | Indonesia **Nov 2018 - Jan 2021**

Lead Android Engineer

*** 27 Silent Syncs Resolved & 99.3% Stability:** Uncovered 27 broken background syncs causing missing transactions and merchant discrepancies; led 12 Android engineers on a gradual 2-month migration to modern Android APIs, dropping sync failures to near-zero and lifting crash-free users from 82% to 99.3%.

*** KYC/KYB Self-Registration Rescue:** Took ownership of a critical merchant self-registration project estimated at 6 months; streamlined scope and shipped in 1.5 months, driving a 10x increase in self-registered merchant conversions.

*** 90-Table Zero-Downtime Migration:** Architected and executed migration of offline-first storage from raw SQL queries to Room across 90 database tables, rolled out gradually over 6 months with zero merchant downtime.

*** MokaPay Architecture:** Architected 'MokaPay', a lightweight standalone POS variant reusing core client architecture with a reduced footprint for high-volume transactions.

Docotel Group | Indonesia **Jul 2017 - Oct 2018**

Lead Mobile Developer

*** Enterprise Mobile Delivery:** Directed client-side mobile engineering on Android and iOS for enterprise client applications from technical specifications through store deployments.

*** Multi-Variant Architecture:** Delivered and maintained multiple client app variants, tailoring features to client-specific requirements while sharing a clean, reusable core codebase.

*** Full-Stack Alignment:** Partnered with Golang backend teams to design low-latency API contracts and robust offline-first synchronization protocols.

EARLY CAREER HISTORY (2011 - 2017)

Mobile Frontend Developer (Android & iOS) - PT Indiva Finansia Teknologi (Jun 2015 - Jun 2017): Built native Android (Java) and iOS (Swift) financial client interfaces adhering strictly to Material Design standards.

Co-Founder & Game Developer - Agate Jogja Studio (Dec 2011 - Oct 2014): Co-founded local game studio; shipped cross-platform game titles across iOS, Android, and Windows with Unity (C#) and Flash (ActionScript 3.0) on constrained startup budgets.

LANGUAGES & PROFESSIONAL COMPETENCIES

English (Professional Working Proficiency) | Indonesian (Native Proficiency)

Core Engineering Philosophy: Autonomous 0-to-1 execution, high-stability production architectures, zero-ceremony startup velocity, and continuous mastery of modern AI developer tooling.
